

Keyboards so clean people can't wait to get their hands on them

Disinfectable, water-resistant, chemical-resistant PC products designed to enhance patient safety and infection control in medical environments.

Yes, they're cool. But they're also tough enough to take a dousing in alcohol, 10% bleach solution, and other potent disinfectants. Not to mention soap and water. With a durable non-porous rubber construction, the disinfectable "Cool" products are

built to withstand the kind of rigorous cleaning that would render other keyboards useless. As a result, bacteria is kept at bay. The transfer of germs is minimized. Healthy environments become healthier.

Featuring an ergonomic design, these good-to-the-touch boards are made to the highest standards and are

easy to use. What's more, noise-free keys ensure there is no disturbance to users or those in their midst. A boon to resting patients.

Ideal for hospitals, laboratories or anywhere cleanliness and reliability are of utmost concern, the "Cool" PC Products provide relief to the high cost of cross-contaminations. With this innovative line of infection-resistant PC tools, control is finally at your fingertips. Now, how cool is that?

About Man & Machine Inc.

Man & Machine, Inc., (www.man-machine.com) is an international provider of leading edge water-resistant computer accessories designed for the cost-effective support of patient safety and infection control in hospitals, medical laboratories, and industrial environments. Man & Machine, Inc. is also a designer, manufacturer, integrator, and repair center for PC products. In addition, the company enhances, customizes, integrates and repairs LCD's for the industrial market. In business since 1982, Man & Machine has been repairing LCD's longer than any company in the world. We are an authorized repair center for Toshiba and IBM, featuring over 8,000 square feet of manufacturing facility and “clean room.” MMI has offices in the metropolitan Washington area, New York City and The Netherlands.
